

Precarious work in higher education

Insecure contracts and how they have changed over time

A REPORT BY UNIVERSITY AND COLLEGE UNION

Supplemental updates

This report was first published in 2019 and has been updated using the latest HESA data we have (2019/20).

A supplemental report in 2023 updated some of the key data. The updated data is taken from the HESA staff data 2021/22, the most recent data we have access to. It also includes the key data from 2020/21 that we published last year for comparison: https://www.ucu.org.uk/media/14007/Precarious-work-in-higher-education--update-August-2023/pdf/UCU_-_Precarious_work_in_higher_education_update_Aug_23.pdf

A supplemental report was also published which uses the 2020-21 HESA data: https://www.ucu.org.uk/media/13163/Precarious-work-in-higher-education---2020-21-data-update/pdf/Precarious_work_in_HE_-_21-22_data_update.pdf

Although there have been some changes in institutional data, the overall trends, and hence the recommendations, remain unchanged.

Job insecurity in universities

The scale of the problem

Fixed-term contracts One third of all academics working in academia are employed on fixed-term contracts. This figure rises to almost half for teaching-only academics (44%) and over two thirds (68%) for research-only staff.

Zero-hours contracts Despite the negative press, widespread campaigning and recent reductions in the use of zero-hours contracts, there are still 29 institutions employing at least five academic staff on such contracts (some employing many more). The total number of academic staff employed on a zero- hours contract is now 3545.

Hourly-paid contracts When it comes to hourly-paid academics, staff are again concentrated in teaching-only roles where 41% of academic staff are on hourly-paid contracts.

Atypical contracts There are 66,115 academic staff employed on 'atypical' contracts which will include those on the most casualised forms of contract.

Casualisation remains a problem for all academic staff groups but the use of fixed-term contracts for research staff, and zero-hours and hourly-paid contracts for teaching-only staff is endemic.

68%

ZERO-HOURS CONTRACTS

18% of higher education institutions use zero-hours contracts to employ at least five academic staff

Insecure contracts

How they have changed over time

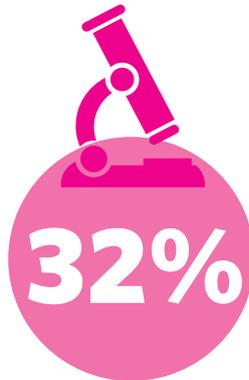

Academic job families: how has the picture changed? The idea that teaching-only and research-only contracts are pathways to a secure teaching and research post is no longer the case. Together they now outnumber the total number of teaching and research staff employed.

Changes in casualisation over the past 12 years While the percentage of academic staff on fixed-term contracts has dropped slightly over the past 12 years, the rates of decline are different in each job family. Furthermore, the actual number of academic staff employed on fixed-term contracts has actually increased by over 12,000.

The rate of change: how does the future look? Assuming the rate of change in the 10 years 2007/8 to 2017/18, it would take nearly 20 years for the percentage of teaching and research staff on fixed-term contracts to fall below 5%. However, in the same period, the percentage of teaching only staff would still be above 45% and 52% of researchers would still be on a fixed-term contract. **It is therefore disingenuous for employers to suggest that the current glacial rate of change will address the endemic problem of casualisation in higher education.**

The academic job family 2007/8 - 2019/20

The increase in the number of academic staff on **research-only contracts** over the last 12 years

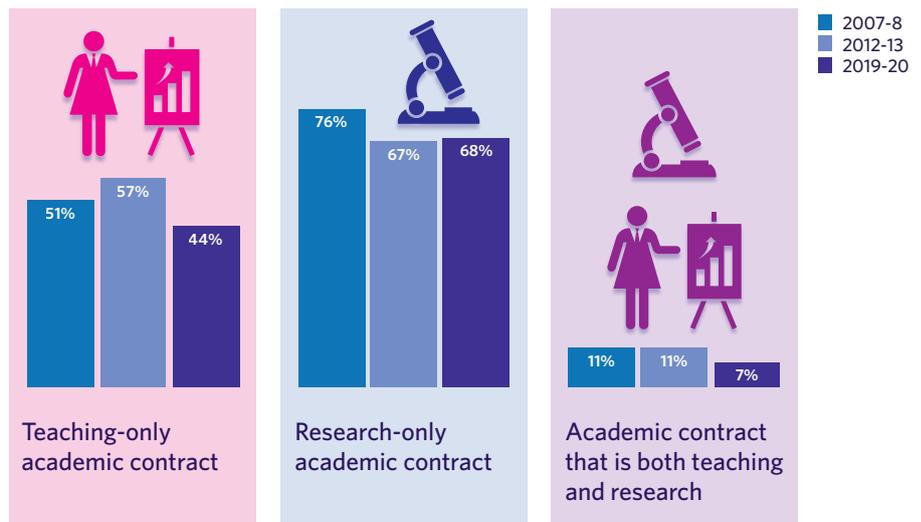

The increase in the number of teaching-only contracts in the last 12 years

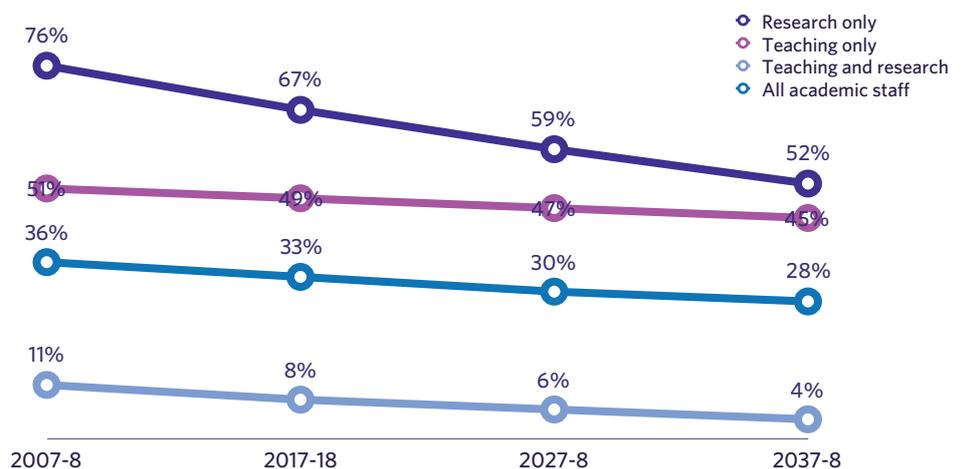

The increase in the number of teaching & research contracts in the last 12 years

The use of fixed-term contracts 2007/8 - 2019/20

The projected rate of change 2007/8 - 2047/48

Recommendations

There is nothing inevitable about the levels of casualisation in the higher education sector, neither has it come about by accident; it is the result of universities' reliance on a particular business model. The data in the appendices demonstrate that levels of casualisation are not consistent across the sector – again another indicator that there is nothing inevitable about the levels of casualisation.

UCU is calling for:

- The government to insist that universities are honest about the extent of casualisation.
- The Office of Students to put a duty on universities to disclose the amounts of teaching – measured in classroom hours – that are being done by hourly-paid staff as a proportion of their total classroom hours. This should include not only lectures but seminars, demonstrations, tutorials and fieldwork.
- Research funders to make it a condition of grant to employ research staff on open-ended contracts and to support more secure employment.
- Those overseeing the Research Concordat to ensure that any employer signing up can demonstrate that they are addressing insecurity of employment, making real improvements to job security, and are able to demonstrate improvements within a reasonable period of time.
- Other award givers eg Athena Swan, Investors in People, to examine the levels of casualisation in any institution making an application, to determine whether the levels of casualisation negatively impact on their own aims and objectives.
- More universities to follow the examples of the more enlightened employers in the sector. Universities to invest in the decasualisation of their workforces and engage with UCU locally to negotiate the transition of precariously employed staff onto more secure contracts.
- Universities who have engaged with decasualisation⁶ to put pressure on their colleagues in other universities through their networks and through the Universities and Colleges Employers Association (UCEA) to force the sector as a whole to admit the scale of the issue, admit that current levels of casualisation damage the whole sector and to take action.

⁶ For examples of UCU branches working with employers to reduce levels of casualisation see: <https://www.ucu.org.uk/socc-casestudies>

Introduction

UCU has been campaigning against the endemic use of casualised contracts in higher education for many decades and we launched our latest anti-casualisation campaign: 'Stamp Out Casual Contracts', back in 2006.

In that time we have seen a significant expansion of the higher education sector but little movement in the use of all types of casualised contracts.

Decisions about the make-up of the academic workforce and the acceptance of high levels of casualisation as 'the norm' have caused untold harm in the sector - in terms of the impact on casualised contract staff themselves, the impact on students and the impact on the workplace environment more generally.

Reducing the levels of casualisation in the sector is at the heart of our 'Four fights' dispute and something that all UCU members, whether or not they are on a casualised contract, see as a priority.

We can no longer sit and passively wait for higher education employers to address these issues; we need to fight, both nationally and locally, to improve the situation in every UK higher education institution.

In this report we highlight the extent of casualisation in the sector, both across the UK and at individual institutions, using the latest HESA data available to us (2019/20). We also look back to provide a time line on the levels of casualisation over a number of years.

1. The Data

Unless otherwise stated, the data produced below is taken from the HESA staff record 2019/20.

- Indicates small sample (<5 or < 22.5%) in line with HESA rounding methodology

THE NUMBERS OF ACADEMIC STAFF ON OPEN-ENDED AND FIXED-TERM CONTRACTS

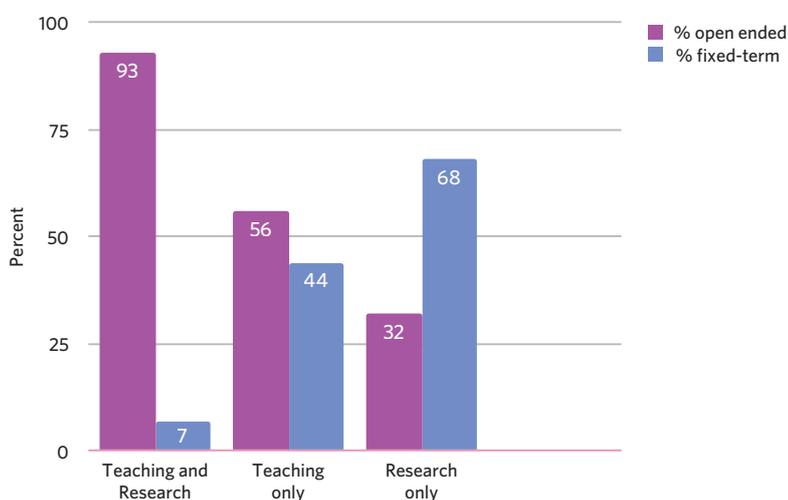

Table 1: The numbers of academic staff on open-ended and fixed-term contracts

| | PERMANENT/OPEN-ENDED | FIXED TERM | TOTAL |
|--|----------------------|------------|--------|
| Academic contract that is teaching only | 40385 | 32135 | 72520 |
| Academic contract that is research only | 16485 | 35025 | 51510 |
| Academic contract that is both teaching and research | 90975 | 7065 | 98040 |
| Neither teaching nor research | 1045 | 340 | 1385 |
| All academic staff | 148890 | 74565 | 223455 |

Table 2: The percentage of academic staff on open-ended and fixed-term contracts

| | PERMANENT/OPEN-ENDED | FIXED TERM (2017/18) | TOTAL |
|--|----------------------|----------------------|-------|
| Academic contract that is teaching only | 56% | 44% (49%) | 100% |
| Academic contract that is research only | 32% | 68% (67%) | 100% |
| Academic contract that is both teaching & research | 93% | 7% (8%) | 100% |
| Neither teaching nor research | 76% | 24% (25%) | 100% |
| All academic staff | 67% | 33% | 100% |

Figure 1: The percentage of academic staff on open-ended and fixed-term contracts

ZERO-HOURS CONTRACTS

HESA data on the use of zero-hours contracts has only been collected since 2017/18 so we are only just able to see any changes in the use of zero hours contracts. However, we have seen a significant drop in the number of zero hours contracts being reported; from 6520 in 2017/18 to 3545 in 2019/20. UCU branches should be proud of their role in making that reduction happen.

Zero-hours contracts have been highlighted as being a poor employment practice over recent years and many employers have committed to not use them and/or to phase out their use locally. Some employers will state that they employ no staff on zero-hours contracts yet engage ‘as and when’, ‘bank’ or ‘sessional’ staff who have no guaranteed hours and are therefore in the same position as zero-hours staff.

UCU has a very clear policy position against the use of zero-hours contracts – a position echoed by the TUC, Labour party and many employers. Fundamentally we believe that everyone should have the right to a contract that guarantees the hours they work. There is nothing in the provision of academic or related work that UCU believes justifies the use of zero-hours contracts. Our clear policy is that such contracts have no place in the workplace. Despite the reduction, the use of zero hours contracts remains a stain on the sector.

According to the HESA data, 29 higher education institutions (HEIs) have at least five academic staff employed on zero hours contracts. That’s 18% of UK HEIs.

Other institutions may use some form of zero-hours contract to employ their ‘atypical’ staff (see below). However, the fact that the majority of UK HEIs do NOT use zero-hours contracts to employ academic staff begs the question why 18% choose to continue to do so.

Table 3: Numbers of academic staff on zero-hours contracts (ZHCs)

| | ON A ZHC | NOT ON A ZHC | TOTAL |
|--|-------------|---------------|---------------|
| Academic contract that is teaching only | 3400 | 69120 | 72520 |
| Academic contract that is research only | 115 | 51395 | 51510 |
| Academic contract that is both teaching and research | 20 | 98020 | 98040 |
| Neither teaching nor research | 10 | 1380 | 1385 |
| Total | 3545 | 219915 | 223455 |

Figure 2: Zero-hours contracts by job family

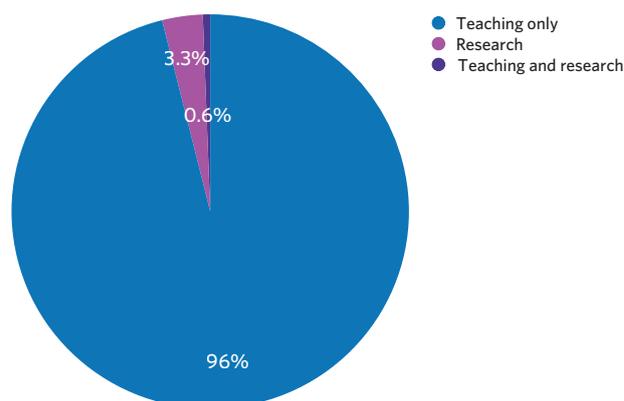

Table 4: Percentage of academic staff employed on zero-hours contracts (ZHCs)

| | ON A ZHC (% FOR 2017/18) | NOT ON A ZHC | TOTAL |
|--|--------------------------|--------------|-------------|
| Academic contract that is teaching only | 5% (7%) | 95% | 100% |
| Academic contract that is research only | 0% (0%) | 100% | 100% |
| Academic contract that is both teaching and research | 0% (2%) | 100% | 100% |
| Neither teaching nor research | 1% (2%) | 99% | 100% |
| Total | 2% (3%) | 98% | 100% |

The following is a list of universities that employ significant numbers of academic staff on zero-hours contracts (more than 5%).

Table 5: Universities employing more than 5% (1 in 20) of all academic staff on zero-hours contracts (ZHCs)

| UNIVERSITY | NO OF ACADEMIC STAFF ON ZHCs | % OF ACADEMIC STAFF ON ZHCs |
|--|------------------------------|-----------------------------|
| Aberystwyth University | 150 | 21% |
| Bangor University | 70 | 7% |
| Birkbeck College | 385 | 35% |
| Birmingham City University | 620 | 31% |
| The Arts University, Bournemouth | 150 | 39% |
| Cardiff Metropolitan University | 170 | 24% |
| Edinburgh Napier University | 50 | 6% |
| University of Essex | 130 | 9% |
| Leeds Conservatoire | 25 | 11% |
| Loughborough University | 150 | 9% |
| Nottingham Trent University | 570 | 24% |
| Royal Holloway and Bedford New College | 95 | 8% |
| Sheffield Hallam University | 440 | 21% |

Table 6: Universities employing more than 5% (1 in 20) of teaching-only staff on ZHCs

| UNIVERSITY | NO OF TEACHING-ONLY STAFF ON ZHCs | % OF TEACHING-ONLY STAFF ON ZHCs |
|-------------------------------------|-----------------------------------|----------------------------------|
| University of Aberdeen | 30 | 7% |
| Aberystwyth University | 145 | 51% |
| Bangor University | 65 | 14% |
| Birkbeck College | 375 | 70% |
| Birmingham City University | 620 | 91% |
| The Arts University Bournemouth | 150 | 63% |
| Cardiff Metropolitan University | 170 | 74% |
| Edinburgh Napier University | 45 | 21% |
| University of Essex | 125 | 18% |
| University of Greenwich | 15 | 20% |
| Leeds Conservatoire | 25 | 12% |
| University of Liverpool | 105 | 10% |
| Loughborough University | 150 | 34% |
| Nottingham Trent university | 570 | 32 |
| Royal Holloway& Bedford New College | 95 | 20% |
| Sheffield Hallam University | 440 | 100% |
| University of Wolverhampton | 5 | 8% |

HOURLY-PAID CONTRACTS

This is also new data from HESA started in 2017/18. We can see that the use of hourly paid contracts has changed ever so slightly in the 2 years since 2017/18; the total % of academic staff employed on an HP contract has increased from 13% to 14%; the % of teaching only staff employed on an HP contract has decreased from 42% to 41%.

Hourly-paid contracts are, in the strictest sense, merely an indicator of how staff are paid. However, hourly-paid staff are usually part-time, often on variable or zero-hours contracts with opaque pay and holiday determination and not benefitting from the same terms and conditions as their salaried colleagues. In addition, hourly-paid staff often have to wait for long periods before being paid for work carried out, and our members report frequent mistakes in their pay calculations. In addition, employers who use large number of hourly-paid staff have to expend significant administration/HR resources purely in the administration of such contracts.

UCU's position is that staff who work less than full-time should be offered fractional contracts with the same terms and conditions as full-time staff.

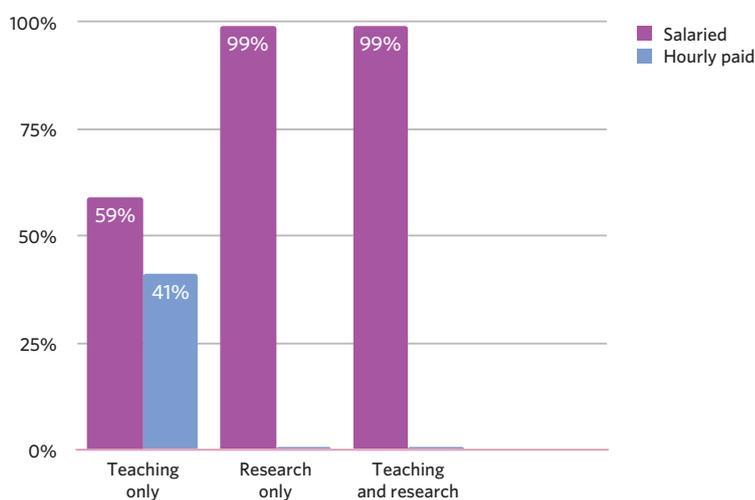

Table 7: Number of academic staff employed on hourly-paid contracts

| | SALARIED | HOURLY-PAID | OTHER | GRAND TOTAL |
|--|---------------|--------------|------------|---------------|
| Academic contract that is teaching only | 42945 | 29370 | 205 | 72520 |
| Academic contract that is research only | 51010 | 445 | 55 | 51510 |
| Academic contract that is both teaching and research | 97545 | 470 | 20 | 98040 |
| Neither teaching nor research | 1350 | 35 | 0 | 1385 |
| Total | 192855 | 30320 | 285 | 223455 |

Table 8: Percentage of academic staff employed on hourly-paid contracts

| | SALARIED | HOURLY-PAID | OTHER | GRAND TOTAL |
|--|------------|-------------|-----------|-------------|
| Academic contract that is teaching only | 59% | 41% | 0% | 100% |
| Academic contract that is research only | 99% | 1% | 0% | 100% |
| Academic contract that is both teaching and research | 99% | 1% | 0% | 100% |
| Neither teaching nor research | 97% | 3% | 0% | 100% |
| Total | 86% | 14% | 0% | 100% |

Figure 3: Percentage of academic staff employed on hourly-paid contracts by job family

PART-TIME STAFF

Although part-time staff are not necessarily on casualised contracts, many casualised contracts are part time so there is a correlation between the likelihood of being part time and the likelihood of being casualised.

Table 9: Number of academic part-time staff and % who are hourly-paid

| | FULL-TIME | FT (TTO)* | PART-TIME | PT (TTO)** | TOTAL | PT HP*** | % OF PT STAFF WHO ARE HP |
|--|---------------|------------|--------------|--------------|---------------|--------------|--------------------------|
| Academic contract that is teaching only | 22290 | 530 | 36515 | 13190 | 72520 | 28290 | 57% |
| Academic contract that is research only | 42070 | 5 | 9400 | 30 | 51510 | 400 | 4% |
| Academic contract that is both teaching and research | 80775 | 25 | 17105 | 130 | 98040 | 415 | 2% |
| Neither teaching nor research | 1045 | 5 | 330 | 10 | 1385 | 35 | 10% |
| All academic staff | 146180 | 565 | 63350 | 13360 | 223455 | 29135 | 38% |

*FT (TTO) = full time, term-time only **PT (TTO) = part-time, term-time only ***PT HP = part-time, hourly-paid

Table 10: Percentage of academic part-time staff

| | FULL-TIME | FULL TIME (TTO)* | PART-TIME | PART-TIME(TTO)* |
|--|------------|------------------|------------|-----------------|
| Academic contract that is teaching only | 31% | 1% | 50% | 18% |
| Academic contract that is research only | 82% | 0% | 18% | 0% |
| Academic contract that is both teaching and research | 82% | 0% | 17% | 0% |
| Neither teaching nor research | 75% | 0% | 24% | 1% |
| All academic staff | 65% | 0% | 28% | 6% |

*TTO = term-time only

ATYPICAL STAFF

Atypical academic staff are those not counted in the main staff record by employers. The guidance from HESA is that atypical contracts meet one or more of the following conditions:

- are for less than four consecutive weeks - meaning that no statement of terms and conditions needs to be issued
- are for one-off/short-term tasks - for example answering phones during clearing, staging an exhibition, organising a conference. There is no mutual obligation between the work provider and working person beyond the given period of work or project. In some cases individuals will be paid a fixed fee for the piece of work unrelated to hours/time spent.

- involve work away from the supervision of the normal work provider - but not as part of teaching company schemes or for teaching and research supervision associated with the provision of distance learning education
- involve a high degree of flexibility often in a contract to work as-and-when required - for example conference catering, student ambassadors, student demonstrators.

Universities have reported that they employ over 66,000 academic staff in such circumstances.

We know that many such staff are employed on the most casual of contracts eg bank staff, but HESA do not collect detailed employment conditions for such staff.

The data collection process for atypical staff is different from the main staff record and we therefore cannot easily compare or compound the two different sets of data.

Table 11: Number of academic staff on atypical contracts

| | |
|---------------------------------------|--------|
| Number of academic atypical staff | 66115 |
| Number of academic non-atypical staff | 223455 |

ACADEMIC-RELATED/PROFESSIONAL SERVICES STAFF

Academic-related staff are those counted in the HESA staff record as employed on non-academic contracts (excluding atypical contracts) at the following levels: senior management, senior function head, function head, non-academic section manager, team leader (professional, technical, administrative), senior professional, and senior administrative professional.

It is important to remember that casualisation does not just affect our academic members and that large numbers of our academic-related/professional services colleagues are employed precariously.

Table 12: The number and percentage of academic-related staff on open-ended and fixed-term contracts

| | PERMANENT/OPEN-ENDED | FIXED-TERM | TOTAL |
|----------------------------------|----------------------|------------|-------|
| Number of academic-related staff | 85130 | 14205 | 99335 |
| % of academic-related staff | 86% | 14% | 100% |

CASUALISATION AND EQUALITY

The HESA data shows that casualisation hits groups of staff with different equality characteristics in different ways. Also, the more likely you are to be on a teaching and research (lecturer) contract, the less likely you are to be casualised (see tables 1 and 2).

We have therefore not only looked at the proportion of different equality groups on casualised contracts but also on the likelihood of each of those groups being in the three academic job families.

Casualisation and gender

Table 13: Percentage academic staff by gender and job family

| | MALE | FEMALE |
|--|------------|------------|
| Academic contract that is teaching only | 47% | 53% |
| Academic contract that is research only | 53% | 47% |
| Academic contract that is both teaching and research | 58% | 42% |
| Total | 53% | 47% |

Table 14: Percentage of academic men and women on casualised contracts

| | PERMANENT/OPEN-ENDED | FIXED-TERM |
|--------------|----------------------|------------|
| Male | 68% | 32% |
| Female | 65% | 35% |
| Total | 66% | 34% |

2% of female academics and 1% of male academics are on zero hours contracts.

Table 15: Percentage of academic men and women on hourly-paid contracts

| | HOURLY-PAID | SALARIED |
|--------------|-------------|------------|
| Male | 13% | 87% |
| Female | 15% | 85% |
| Total | 14% | 86% |

So women are less likely than men to be on a teaching and research contract but more likely to be on a fixed-term contract, zero-hours contract and/or an hourly-paid contract.

Casualisation and race

All ethnicity data calculations exclude data for staff whose ethnicity is unknown.

Table 16: Academic staff by race and job family

| | BLACK | ASIAN | OTHER INCLUDING MIXED | WHITE |
|--|-----------|------------|-----------------------|------------|
| Academic contract that is teaching only | 3% | 8% | 5% | 84% |
| Academic contract that is research only | 2% | 18% | 6% | 74% |
| Academic contract that is both teaching and research | 2% | 9% | 4% | 84% |
| Total | 2% | 11% | 5% | 82% |

Table 17: Casualised academic staff and ethnicity

| | PERMANENT/OPEN-ENDED | FIXED-TERM |
|-------------------------|----------------------|------------|
| Black | 60% | 40% |
| Asian | 57% | 43% |
| Other (including mixed) | 59% | 41% |
| White | 70% | 30% |
| Total | 68% | 32% |

So BAME staff are significantly more likely to be on a fixed-term contract than white staff – which is true for all non-white ethnic groups.

Table 18: Academic staff on zero-hours contracts and ethnicity

| | ON A ZHC | NOT ON A ZHC |
|-------------------------|-----------|--------------|
| Black | 3% | 97% |
| Asian | 1% | 99% |
| Other (including mixed) | 1% | 99% |
| White | 2% | 98% |
| Total | 2% | 98% |

So Black staff are 50% more likely than white staff, and three times more likely than Asian staff, to be on a zero-hours contract.

Table 19: Academic staff on hourly-paid contracts and ethnicity

| | HOURLY-PAID | SALARIED |
|----------------------------|-------------|------------|
| Black | 19% | 80% |
| Asian | 11% | 89% |
| Other (including mixed) | 15% | 85% |
| White | 12% | 88% |
| Total | 12% | 87% |

This shows that Black staff are most likely to be on an hourly-paid contract. In fact, nearly one in five Black academics are employed on an hourly-paid contract.

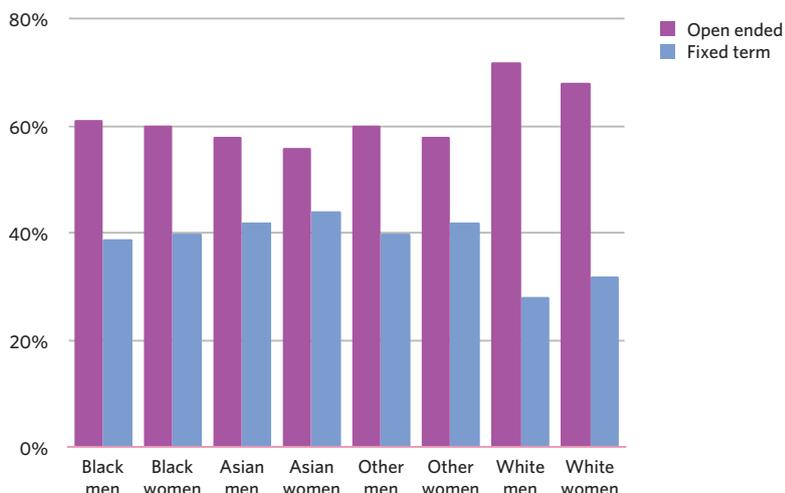

Casualisation, race and gender

Table 20: Casualised academic staff by race and gender

| | PERMANENT/OPEN-ENDED | FIXED-TERM |
|----------------------------------|----------------------|------------|
| Black men | 61% | 39% |
| Black women | 60% | 40% |
| Asian men | 58% | 42% |
| Asian women | 56% | 44% |
| Other men (including mixed) | 60% | 40% |
| Other women (including mixed) | 58% | 42% |
| White men | 72% | 28% |
| White women | 68% | 32% |

Figure 4: Casualised academic staff by race and gender

So these figures show that white men are the least likely group to be on a fixed-term contract (although at 28%, still more than 1 in 4) and Asian women are the most likely, with nearly half (44%) on fixed-term contracts.

Table 21: Academic staff on zero-hours contracts, gender and ethnicity

| | ON A ZHC | NOT ON A ZHC |
|-------------------------------|----------|--------------|
| Black men | 3% | 97% |
| Black women | 3% | 97% |
| Asian men | 1% | 99% |
| Asian women | 1% | 99% |
| Other (including mixed) men | 1% | 99% |
| Other (including mixed) women | 2% | 98% |
| White men | 1% | 99% |
| White women | 2% | 98% |

Table 22: Academic staff on hourly-paid contracts, gender and ethnicity

| | HOURLY-PAID | SALARIED |
|-------------------------------|-------------|----------|
| Black men | 19% | 81% |
| Black women | 20% | 80% |
| Asian men | 9% | 91% |
| Asian women | 13% | 87% |
| Other (including mixed) men | 14% | 86% |
| Other (including mixed) women | 16% | 84% |
| White men | 12% | 88% |
| White women | 13% | 87% |

Again table 22 shows that Black men and women are disproportionately employed on hourly-paid contracts.

Casualisation and disability

All disability data calculations exclude data for staff whose disability status is unknown.

Table 23: Academic staff by disability

| | KNOWN DISABILITY | NO KNOWN DISABILITY |
|--|------------------|---------------------|
| Academic contract that is teaching only | 6% | 94% |
| Academic contract that is research only | 4% | 96% |
| Academic contract that is both teaching and research | 5% | 95% |
| Total | 5% | 95% |

Table 24: Casualised academic staff and disability

| | PERMANENT/OPEN-ENDED | FIXED-TERM |
|---------------------|----------------------|------------|
| Known disability | 67% | 33% |
| No known disability | 67% | 33% |
| Total | 67% | 33% |

Table 25: Academic staff on zero-hours contracts and disability

| | ON A ZHC | NOT ON A ZHC |
|---------------------|-----------|--------------|
| Known disability | 1% | 99% |
| No known disability | 2% | 98% |
| Total | 2% | 98% |

The proportion of all academic staff on hourly-paid contracts is 14%, the same percentage for disabled staff and those with no known disability.

The links between part-time working, casualisation and equality

Table 26: The percentage of men and women academic staff on part-time contracts

| | PART-TIME | FULL-TIME |
|--------|-----------|-----------|
| Male | 29% | 71% |
| Female | 41% | 59% |

Table 27: The percentage of academic staff of different ethnicities on part-time contracts

| | PART-TIME | FULL-TIME |
|-------------------------|-----------|-----------|
| Black | 33% | 67% |
| Asian | 23% | 77% |
| Other (including mixed) | 32% | 68% |
| White | 35% | 65% |
| Total | 33% | 67% |

Table 28: The Percentage of Disabled academic staff and academic staff with 'no known disability' on part-time contracts

| | PART-TIME | FULL-TIME |
|---------------------|-----------|-----------|
| Known disability | 40% | 60% |
| No known disability | 34% | 66% |

Table 29: Academic staff on part-time contracts, gender and ethnicity

| | PART-TIME | FULL-TIME |
|-------------------------------|-----------|-----------|
| Black men | 29% | 71% |
| Black women | 37% | 63% |
| Asian men | 18% | 82% |
| Asian women | 30% | 70% |
| Other (including mixed) men | 27% | 73% |
| Other (including mixed) women | 37% | 63% |
| White men | 29% | 71% |
| White women | 41% | 59% |

We know that there is a correlation between part-time working and casualisation and the tables above show that women (in particular Black and white women) and disabled academics are the most likely to be working part time.

2. Employer attitudes

Employers often argue that staff themselves enjoy the flexibility of a casualised contract yet that is never borne out in reality when casualised staff are asked their opinion or when more secure contracts are offered.

For example, in our 'Counting the costs of casualisation in higher education' report (June 2019)¹ members on casualised contracts clearly indicated that being on such a contract was not their choice; 97% of those on fixed-term contracts would prefer a permanent one and 80% of respondents on hourly-paid contracts stated that they would rather be on a contract that guaranteed them hours, even if that meant less flexibility.

Employers too often view permanent, secure employment as too costly or risky and use insecure contracts to offload the risk to individual employees – leaving them in a precarious situation and often on far worse terms and conditions of employment.

The national employers' body (UCEA) points out that there is a "trend towards more open-ended and full-time academic employment" and that the number of atypical staff has fallen since 2011/12. They use this to belittle the work UCU and others have done, referring to it as "the 'casualisation' campaigning".² We unpick some of these figures in the 'Changes over Time' section below but we remain disappointed that the national employers continue to underplay the scale of casualisation in the sector and its damaging effect.

However the picture is not even across the sector (see Appendix 1). A number of employers have taken a more enlightened approach and worked with UCU to move teaching-only staff to fractional contracts, to move researchers to permanent contracts and have committed to not using zero-hours contracts.

<https://www.ucea.ac.uk/library/publications/he-workforce-report-2019>

3. Changes over time

CHANGING DEMOGRAPHICS OF ACADEMIC STAFF

The number of academic staff employed by higher education institutions has increased significantly since 2007/8 – by a total of 30% according to the HESA data. However, the increase in academic staff has not been evenly distributed across the three academic job families.

Table 30: Numbers of academic staff employed 2007/8 – 2019-20³

| | 2007/8 | 2012/13 | 2019/20 | % INCREASE |
|---|--------|---------|---------|------------|
| Numbers of all academic staff | 171380 | 183745 | 223455 | 30% |
| Numbers of academic staff on teaching-only contracts | 42675 | 46795 | 72520 | 70% |
| Number of academic staff on research-only contract | 39120 | 42350 | 51510 | 32% |
| Number of academic staff on teaching and research contracts | 89585 | 94600 | 98040 | 9% |

These disproportionate rises in the numbers of teaching only and research only staff compared to the rise of teaching and research posts, may go some way to explaining why casualisation has become so entrenched in the sector.

Table 31: Proportion of academic staff in each academic job family 2007/8 – 2017-18

| | 2007/8 | 2012/13 | 2019/20 |
|---|--------|---------|---------|
| Proportion of academic staff on teaching-only contracts | 25% | 25% | 32% |
| Proportion of academic staff on research-only contract | 23% | 23% | 23% |
| Proportion of academic staff on teaching and research contracts | 52% | 51% | 44% |

Table 31 shows that whilst the proportion of academic staff on a research only contract has remained steady, there has been a significant increase in the proportion of academic staff on a teaching only contract. In contrast, the proportion of academic staff on a teaching and research contract has been steadily falling and the proportion of academic staff on the ‘traditional lecturer’ (teaching and research) contracts has now fallen below 50%.

The idea that teaching only and research only contracts are pathways to a secure teaching and research post is no longer the case –together they now outnumber the total number of teaching and research staff employed.

³Data taken from the HESA staff record 2007/8, 2012/13 and 2019/20

CHANGES IN CASUALISATION SINCE 2007/08

Table 32: Changes in the use of fixed-term contracts 2007/8 - 2019/20

| | PERCENTAGE ON FIXED-TERM CONTRACTS | | |
|--|------------------------------------|---------|---------|
| | 2007/08 | 2012/13 | 2019/20 |
| Academic contract that is teaching only | 51% | 57% | 44% |
| Academic contract that is research only | 76% | 67% | 68% |
| Academic contract that is both teaching and research | 11% | 11% | 7% |
| All academic staff | 36% | 36% | 33% |

Whilst the percentage of staff on fixed-term contracts has dropped slightly over the 12-year period the actual number of academics employed in this way has seen a net increase of over 12,000 in the same period - so claims that the levels of casualisation are falling are grossly over-exaggerated.

THE RATE OF CHANGE

(We have continued to use the data for 2007/8 and 2017/18 to enable us to track changes over a 10-year period).

We know that the pattern of casualisation is not equal across universities - some for example use fixed-term contracts for very few members of academic staff and others have whole job families employed on some form of casualised contracts. So, in looking at how long it would take to reduce the levels of fixed-term contracts we are looking at an artificial picture in some ways.

However, given the rate of change from 2007/8 - 2017/18 how long would it take for the employment of academic staff on fixed-term contracts to fall below 5% (ie less than one in 20)?

Table 33: rate of change in fixed-term contract use based on change recorded by HESA from 2007/8 to 2017/18

| | RATE OF CHANGE PER DECADE |
|--|---------------------------|
| Academic contract that is teaching only | -3.93% |
| Academic contract that is research only | -11.84% |
| Academic contract that is both teaching and research | -27.27% |
| All academic staff | -8.33% |

Assuming the current rate of change and no changes in the proportions of academic staff in different job families; the figure below shows that it will take nearly 20 years for the proportion of teaching and research staff to fall below 5%.

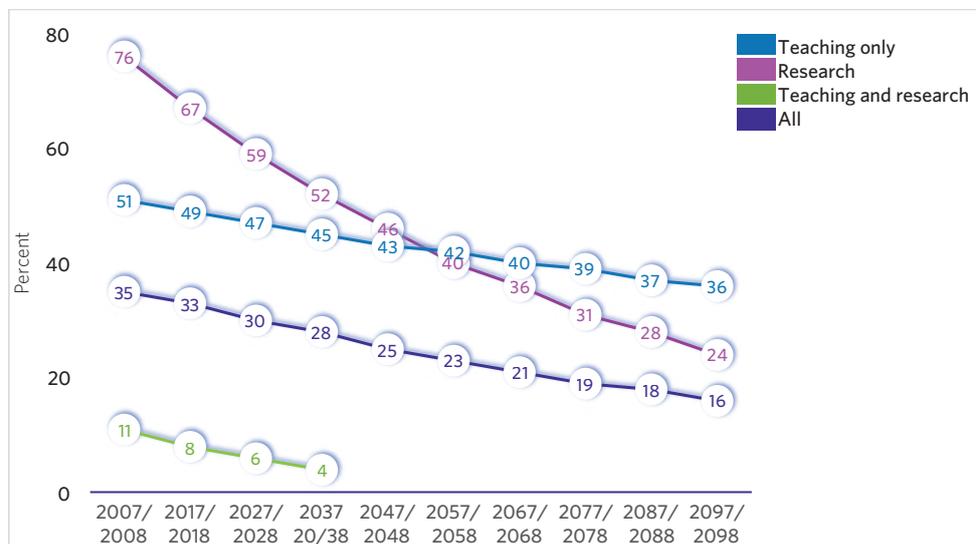

However, in the same period, the proportion of fixed-term contracts for teaching-only and research-only staff would still be above 45% and 50% respectively.

In fact, it would take 200 years for the percentage of research staff on fixed-term contracts to fall below 5% and over 500 years for teaching-only staff!

It is therefore disingenuous for employers and employers' bodies to imply that the current rate of glacial change is sufficient to address the problem of endemic casualisation within higher education.

Figure 5: Reduction in the use of fixed-term contracts projected to the end of the century at the current rate of change

4. Why tackling casualisation in higher education matters

UCU's 'Counting the costs of casualisation in higher education' report (June 2019) was based on survey responses from nearly 4000 higher education staff employed on casualised contracts.

Almost 60% of those responding said they had struggled to make ends meet, while 40% said they had struggled to pay bills.

83% of those completing the survey stated that their insecure contract made it hard to make long-term financial and family plans.

Worryingly, 71% of respondents reported that they believed their mental health has been damaged by working on insecure contracts.

Not surprisingly, 85% had considered leaving the sector – the main factor being job insecurity. However, most were passionate about their work and wanted to stay in the sector, preferably in a secure teaching and research role. We are at risk of losing huge amounts of talent from the sector, purely because of the way universities are choosing to employ their staff.

In their report: *Second class academic citizens: the dehumanising effects of casualisation in higher education*,⁴ Drs Nick Megoran and Olivia Mason of Newcastle University argued that casualised contracts have a dehumanizing impact on staff in four ways: invisibility, vulnerability, lack of agency and inability to project into the future.

In its report 'What Researchers Think About the Culture They Work in'⁵ (January 2020), the Wellcome Trust noted the widespread concerns that research staff have about job security in academia with survey respondents reporting little confidence in pursuing a research career. The report also highlighted widespread experience of bullying or harassment and belief that the power imbalances in the workplace (which will be amplified for those on casualised contracts) contributed to bullying and harassment being culturally systemic. In the survey, 70% of respondents indicated that they felt

⁴Second class academic citizens:

https://www.ucu.org.uk/media/10681/second_class_academic_citizens/pdf/second-classacademiccitizens

⁵What Researchers think about the culture they work in:

<https://wellcome.ac.uk/reports/what-researchers-think-about-research-culture>

stressed on an average working day, with respondents working in academia being significantly more likely to report feeling stressed than those working in industry.

In our 'Counting the Cost' report we also sought to determine the ways in which casualised contracts impact on research outputs and the student experience.

Nearly three quarters of researchers said that the research they had been involved with had been negatively affected by being employed on short-term contracts, over 80% said their own research activity had been negatively affected, only 6% agreed that employing people on short-term contracts is economical and cost-effective and nearly all (96%) believed that more secure employment would help foster genuinely innovative research activity.

Very large majorities of casualised teaching staff reported that they have inadequate paid time to prepare for their classes, mark student work, give students feedback or undertake the scholarship necessary to remain subject specialist. Where these activities were being done, they were being done in their own time, unpaid. Employers cannot delude themselves that the large volumes of teaching being delivered by casualised staff in this way is not short-changing students – despite the best (unpaid) efforts of the staff on casualised contracts.

The HESA data clearly shows that casualisation hits groups of staff with different equality characteristics in different ways: women are more likely than men to be on fixed-term contracts; BAME academics are more likely to be on fixed-term contracts than their white colleagues, Black academics are 50% more likely as white academics to be on a zero-hours contract; white men are the least likely group to be on a fixed-term contract (28%), Asian women are the most likely (44%). If gender and race inequality is to be tackled, then the levels of casualisation also need to be addressed.

Universities often talk about being 'fit for the future' but in many institutions the employment practices for staff on casualised contracts remain positively feudal. The working environment for staff is the learning environment for students and UCU will continue to campaign around casualisation until employers start to treat all their staff with the respect they deserve – in the interests of both staff and students.

If universities want to regard themselves as good employers, if they want to give their students the best experience, if they want to be centres of research excellence and if they want to demonstrate their commitment to equality and against bullying and harassment then they need to address their use of casualised contracts.

5. Recommendations

There is nothing inevitable about the levels of casualisation in the higher education sector neither has it come about by accident; it is the result of universities' reliance on a particular business model.

The data in the appendices demonstrate that the levels of casualisation are not consistent across the sector – again another indicator that there nothing inevitable about the levels of casualisation.

UCU is calling for:

- The government to insist that universities are honest about the extent of casualisation.
- The Office of Students to put a duty on universities to disclose the amounts of teaching – measured in classroom hours – that are being done by hourly-paid staff as a proportion of their total classroom hours. This should include not only lectures but seminars, demonstrations, tutorials and fieldwork.
- Research funders to make it a condition of grant to employ research staff on open-ended contracts and to support more secure employment.
- Those overseeing the Research Concordat to ensure that any employer signing up can demonstrate that they are addressing insecurity of employment, making real improvements to job security, and are able to demonstrate improvements within a reasonable period of time.
- Other award givers eg Athena Swan, Investors in People, to examine the levels of casualisation in any institution making an application, to determine whether the levels of casualisation negatively impact on their own aims and objectives.
- More universities to follow the examples of the more enlightened employers in the sector. Universities to invest in the decasualisation⁶ of their workforces and engage with UCU locally to negotiate the transition of precariously employed staff onto more secure contracts.
- Universities who have engaged with decasualisation to put pressure on their colleagues in other universities through their networks and through UCEA to force the sector as a whole to admit the scale of the issue, admit that current levels of casualisation damage the whole sector and to take action.

⁶ For examples of UCU branches working with employers to reduce levels of casualisation see: <https://www.ucu.org.uk/socc-casestudies>

Appendices: Institution data

INDIVIDUAL INSTITUTIONS

In the main body of the report we have looked at the picture in aggregate, across all UK higher education institutions. However the picture is not uniform and the data below shows a differing pattern across the UK.

This data is intended to assist branches in negotiating for more secure contracts at their own institutions.

It does however also indicate, quite clearly, that the levels of casualisation used by some institutions are not an inevitability but an institutional choice.

Note: Where cells are empty the numbers are below 5 or HESA has not provided data for that institution. These tables are based on the 2019/20 HESA staff record and we know that some employers have negotiated with UCU to reduce their levels of casualisation since that time.

APPENDIX 1: THE USE OF FIXED-TERM CONTRACTS BY JOB FAMILY

The levels of fixed-term contracts are one indicator of casualisation but do not necessarily tell the whole picture. Moving away from using fixed-term contracts to permanent/open-ended contracts is a positive step but branches also need to ensure that any new permanent open-ended contracts do improve security of employment and are not merely contracts with a 'likely redundancy date' included.

Table A1: The number and % of staff on fixed-term contracts by job family

| | All academic staff | | Teaching-only staff | | Research staff | | Teaching and research staff | | Academic-related | |

Note: A low level of fixed-term contracts also doesn't necessarily mean more secure employment (although it is usually the first step towards more secure employment) - branches will need to interrogate the situation on the ground more closely to see whether a low level of fixed-term contract use is matched with real job security.

APPENDIX 2: HOURLY-PAID CONTRACTS, ZERO-HOURS CONTRACTS, ATYPICAL STAFF

Table A2: The number and % of staff on hourly-paid and zero-hours contracts and the number of 'atypical' staff employed

The traffic light system has been used for local UCU branches to have a quick visual impression of the situation at their university. However, some caution needs to be applied in interpreting the results and it is important that branches look at the local circumstances for changes occurring in their workplaces.

The use of fixed-term contracts is only one measure of casualisation and local circumstances will impact on how these changes have occurred. For example, a large rise in the use of fixed-term teaching staff could be a result of the move from staff from (permanent) zero-hours contracts onto guaranteed hours fixed-term contracts. The converse is also true. Some institutions with high numbers of fixed-term contracts may be showing 'green' but still have very high levels; those with very low usage may show as amber but actually represent best practice.
